

StreamVerse — Internal Data & AI Usage Policy

Compliance & Legal Division | Version 2.1 | January 2025

1. Data Classification

All internal data is classified into three tiers: Tier 1 (Public) — press releases, public-facing content metadata. Tier 2 (Internal) — aggregated analytics, genre performance summaries, regional trends. Tier 3 (Confidential) — individual viewer PII, financial projections, salary data, unreleased content details. Access to Tier 3 data requires VP-level approval.

2. AI Assistant Usage Rules

The internal AI assistant (InsightAI) is authorized to access Tier 1 and Tier 2 data only. Under no circumstances should individual viewer PII be passed to AI models. All queries to the AI assistant are logged for compliance review. AI-generated insights must be validated by a human analyst before being used in board presentations.

3. Viewer Privacy

Viewer data must be anonymized before any analytical processing. Aggregation must occur at a minimum cohort size of 100 viewers. Individual watch histories may not be queried by name or viewer ID through AI tools. GDPR and IT Act 2000 compliance is mandatory for all data operations.

4. Approved Data Sources for AI

- Aggregated movie performance metrics (revenue, ratings, views)
- Genre-level and city-level engagement trends
- Marketing channel performance summaries
- PDF internal reports (quarterly, campaign, roadmap)
- Anonymized audience segment behavior data
